Aesculap Bonum Pro

battery-powered clippers with powerful Li ion battery – for the full clipping of horses

- lightweight horse clipper weighing just 920 g
- suitable for complete and partial clipping
- ergonomic, short and well-balanced for low-fatigue clipping
- short and handy - fits well even in smaller hands
- clip for up to 130 minutes using a battery
- the battery charge time is just 65 minutes

You can choose between 2 colour and 2 equipment variants:

- blue or Design edition
- 1 battery or 2 batteries

GT654-NB blue 1 battery
GT656-NB blue 2 batteries
GT654-WT1 1 battery Design edition
GT656-WT1 2 batteries Design edition

Aesculap Durati Horse

Cordless clippers for partial clipping

The particularly handy, lightweight and quiet Durati with a wide cutter head (#10 W) is especially suitable for small clipping areas on horses, e.g. on the head or legs.
It is the perfect complement to Bonum large animal clippers or other full clipping clippers such as Econom II and Econom CL.

Special advantages of the Durati:

- Li ion battery for up to 4 h of clipping
- Easy folding down of cutter head by means of a push button without the use of further tools for easy changing and cleaning
- 3,500 strokes for fast working
- Fine-toothed premium Aesculap cutter head incl. #10 W with 2.4 mm clipping height (67 mm wide)
- In a practical solid plastic case for safe storage

Item No. GT444-BS

A perfect duo for horse clipping

AESCULAP®
CLIPPERS

Quality from Germany – since 1912

Optional accessories

Precision Adjusting Aid Torqui

The Torqui torque wrench allows you to adjust the cutter head perfectly and easily for the Bonum and all Aesculap Econom clipping plates.

- the ultimate tool for optimum clipping blade pressure
- consistent edge-retention
- increase in the cutter head's service life since the interval between grindings is extended

1. position the pins in the holes provided on the adjusting screw
 2. turn clockwise "Click Click" until the Torqui is idling
- = you have now set the ideal plate position

Item No. GT146

Horse Clipping

Why and when should a horse be clipped?

- clipping is recommended depending on the husbandry conditions and how much work the horse does
- the horse overheats less when riding and is therefore more willing to perform
- the horse dries faster after riding and is thus protected from colds
- the shorter coat is easier to keep clean
- the horse does not sweat when it stands in the warm stable

Horse clipping is recommended when:

- the horse is ridden regularly - at least 3 times a week and is wet with sweat after riding
- your horse's coat takes longer than 20 minutes to dry
- the horse is already sweating in the stable (winter coat is denser and therefore too warm)
- the horse gets a long, thick winter coat, cannot be properly cleaned and dried very slowly

You can read on the following pages which types of clipping there are and which type is used when.

Please make sure you cover your horse with an appropriate blanket to keep it warm, regardless of which clipping type you choose.

Tips for clipping horses

BEFORE CLIPPING

- Set aside around 2 hours
- Your horse should be relaxed. recommended after pasture time and the evening meal
- the horse should be clean, brushed and dry since dirt and sand can cause the cutter blades to become blunt more quickly
- If your clipper has a cable, this must be secured! (ideally hang it from above so that the horse does not accidentally stand on it)
- in order to get your horse used to the machine and the noise, touch the horse slowly at first and hold the machine in the direction of the horse's ears while it is running

DURING CLIPPING

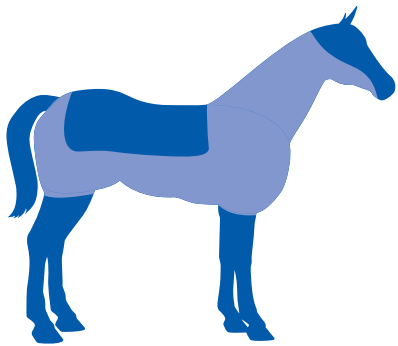

- always clip in even strokes against the direction of growth of the coat
- the shear strokes should overlap by at least 2 centimetres so that no edges are left standing
- change the angle of the clipper for heavy sections or use the more manageable Durati for harder-to-reach areas
- brush the loose coat from the horse
- oil the cutter blades generously every 10 minutes

Clipping Pattern

Blanket Clipping

For moderately active horses who overnight in the stable.

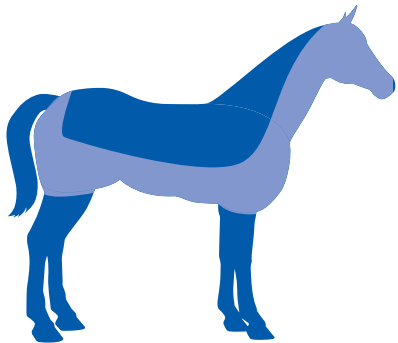

- mark out the shape of the blanket with chalk on the horse
- the lowest saddle line specifies how far down the blanket clipping extends
- always round off the corners when clipping

Trace Clipping

For horses that in some cases work more, overnight in the stable and who are lightly covered in the pasture during the day.

- The difference to blanket clipping: the neck muscles remain covered with winter fur
- mark out the area in the same way as with blanket clipping and continue the line on the neck up to the ears

Hunter Clipping

This clipping type was developed for hunting horses. It is suitable for all horses that perform medium to heavy work.

- the legs and saddle area are not clipped
- put the saddle on and mark out the outline with chalk
- mark each line on the legs. use your hands to measure a standardised height
